Dear Canonical Partner Marketing team,

I am applying for the Graduate Partner Marketing Manager role, based remotely in the Americas. One fact belongs up front: I am not a graduate yet, my Licenciatura en Marketing at Universidad CAECE is still in progress and I expect to graduate in December 2027.

Your partner programmes run across eight tracks, from public cloud and silicon to ISVs and channel resellers, and the launches are genuinely technical: Ubuntu 26.04 LTS shipped in April as the first release to distribute NVIDIA CUDA natively, with AMD ROCm alongside it. An announcement like that must survive contact with engineers before it reaches a C-suite, and I can read what I would be announcing:

- I ship working software. Three production web apps built with Claude Code and deployed by me on Vercel: a marketing platform with 5 live tools on the Gemini API, a dashboard over a real public BigQuery GA4 dataset, and a news portal in Astro.
- A judgment call about where generation stops. In my platform nothing verifiable is asked of the model: domain, title and meta description are computed server-side, never generated. A technical claim in a partner announcement needs that same discipline.
- Data before instinct. SQL through module 5 of the Google Data Analytics Professional Certificate, applied to that dashboard's queries.
- Commercial and customer-facing. At BBVA Argentina I drive adoption of digital products: over 100 customers a week into the app and online banking, over 50 queries a week resolved with a retention focus.

On the gaps, equally directly: I have no experience in open source, Linux or Ubuntu, none in partner, alliance or channel marketing, and none in the enterprise software channel or developer relations. Your posting offers to teach the technical and commercial nuances of the open-source world, and that is why I am writing now rather than in two years. What I can show meanwhile is how fast I close a gap: the Licenciatura, a UTN Diploma in Oral Communication and Rhetoric, and the Google certificate at module 5, all while working full time.

Canonical has been fully distributed since its origin in 2004 and names collaboration, rigor and precision among the qualities it expects. That model screens for people who produce without being told to: my three projects had no brief, no manager and no deadline. I work in native Spanish and advanced English across the Americas, and I am willing to travel for the sprints the role expects.

I look forward to hearing from you.

Kind regards,

Bianca Dondero
