Dear Sezzle Hiring Team,

I am applying for the Marketing Growth Analytics & Operations Intern role. The part of the posting I can speak to directly is writing the queries and building the reporting that say whether a program worked: I am on module 5 of the Google Data Analytics Professional Certificate (BigQuery and Google Standard SQL), with my own SQLite practice on marketing and CRM datasets, and I have shipped a dashboard that queries a real public BigQuery GA4 ecommerce dataset and renders KPIs and trends, built with Claude Code.

Sezzle's mission is to financially empower the next generation of change-makers, and the app is already more than payments: Money IQ makes financial literacy something shoppers come back to, and your values page puts it as small steps leading to greater confidence. That is close to what I do all day in retail banking: I guide over 100 customers a week into using an app and online channels they had not used before, and adoption is the step before any lifecycle or subscription metric moves.

What I would bring to measuring your consumer programs:

- Queries and dashboards I built myself: not a report handed to me to maintain, but one I scoped, queried and shipped on real BigQuery data, broken out by product and by audience segment, with a daily AI-generated summary.
- Retention and lifecycle operations: daily CRM and internal-systems work at BBVA Argentina, over 50 queries a week logged and resolved with a retention focus rather than as one-off transactions, which is the operational habit a lifecycle program runs on.
- AI already in my workflow: I build with Claude Code and have put the Gemini API into production in two of my own tools; recurring reports and first-pass analyses are where I would automate first.

Three things I would rather name than imply. My degree is in Marketing, not one of the technical fields you list; the technical base is the certificate, the SQL and the three apps above, and the Marketing degree is the business and product side your posting asks that background to be drawn to. I have no hands-on Braze experience; the closest is the CRM operations I run daily and the flows and email fundamentals I am currently learning in Klaviyo. And I have not designed or measured A/B tests inside a company, so experiment design is something I would be learning here, from a base of defining the success metric before pulling the data.

This role is where evidence over intuition is the job and not just a preference. I look forward to hearing from you.

Kind regards,

Bianca Dondero
